Title of invention: INFORMATION PROCESSOR
Abstract:

PURPOSE: To enable a user to freely set characters which differ in character enlargement rate at optional positions without performing complicated operation and then perform diverse document editing only by selecting and specifying the positional relation between the characters differing in enlargement rate, on a keyboard, etc., through a character position justifying means.

CONSTITUTION: When there are the characters which differ in enlargement rate in the same line, the positional relation between the characters which differ in character enlargement rate is set to bottom justification, top justification, or center justification at 'character justification' of 'position justification setting', and then, the reference position of character strings are found according to the maximum enlargement rate among the character enlargement rates of the character strings and the setting of 'character justification' so that the characters which differ in enlargement rate are put in the set positional relation when printed (S5-S7), and character images are developed and printed (S8 and S9, and at printing positions to be developed (S17-S20).
